

TASK DESCRIPTIONS

BRIDGE BUILD

A partially constructed suspension bridge lies between your resources and building site. Using the pieces provided and their skill and judgement, the teams must complete the bridge to precise specifications in order to allow your resources to cross safely.

WHAT A PANE

The foundations are in and the building is up, all that stands between you and completion are the windows. Unfortunately, the glass comes in numerous irregular pieces and half of your team is blindfolded. Team must install the windows before time runs out.

TRUCK STOP

Your resources have arrived and are ready to be transported but the HGV is not starting. Using limited resources, team must construct a vehicle to transport their resources to site.

FLOOR IT

Your flooring system has arrived but there appears to be a problem, no instructions. Each piece is different and only fits together in one way. Teams must logically work through the pieces to find the solution, whilst up against the clock.

WATERWORKS

A new water tank has arrived on site but the supplier forgot to deliver the pipe work. Using the resources available teams must install the connecting pipe work to a detailed specification ensuring there are no leaks.
